

Wilf grew up in Melville Saskatchewan. He pursued graduate studies at the University of Saskatchewan, specializing in Crop Science. He was subsequently employed as a scientist and research manager with both Agriculture and Agri-Food Canada and the National Research Council of Canada. His research involved the development and application of biotechnology in crop improvement with a major focus on canola.

Following his retirement from the federal government, Wilf held CEO positions with Genome Prairie and AgWest Bio. During his career, Wilf had the opportunity to lead major projects in crop genetic modification and genomics. He has had the privilege of serving on a number of boards, including the Agri-Food Innovation Council, Protein Industries Canada, and the Global Council for Innovation in Rapeseed and Canola.

He currently resides in Calgary where serves as a science advisor for Creative Destruction Lab, Rockies.
